(57) Abstract: A support assembly to support a bar (11) of a roof rack assembly for a motor vehicle includes a base (12) to which the bar (11) is attached. The bar (11) includes a longitudinal cavity (46) that provides for the attachment of articles to the bar (11). The support assembly further includes a cover (24) that is captively attached to the base (12) but movable relative thereto between a lock position preventing access to a threaded shaft (18) that is used to secure the support assembly to the vehicle and the cavity (46), and a displaced position providing access to the cavity (46) and threaded shaft (18).
